

DATE APRIL 30<sup>TH</sup>, 2021

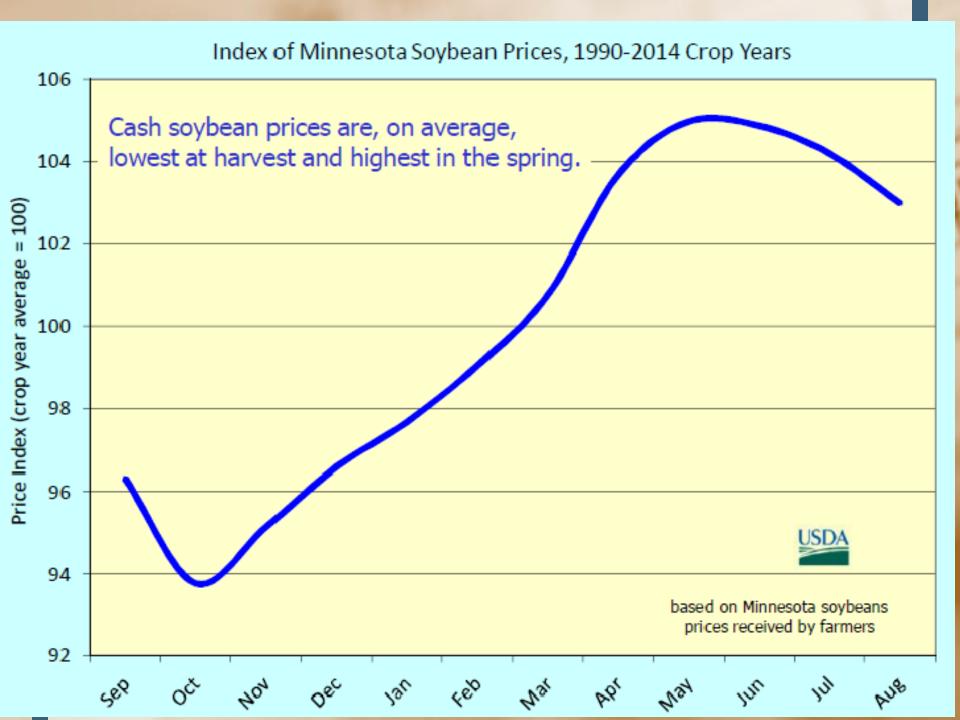

## Topics for April 30th, 2021

- Current Chart Comparison
- Updates on Grain Prices and Basis/Carry-Review Marketing Plans
- Market Information Outlook

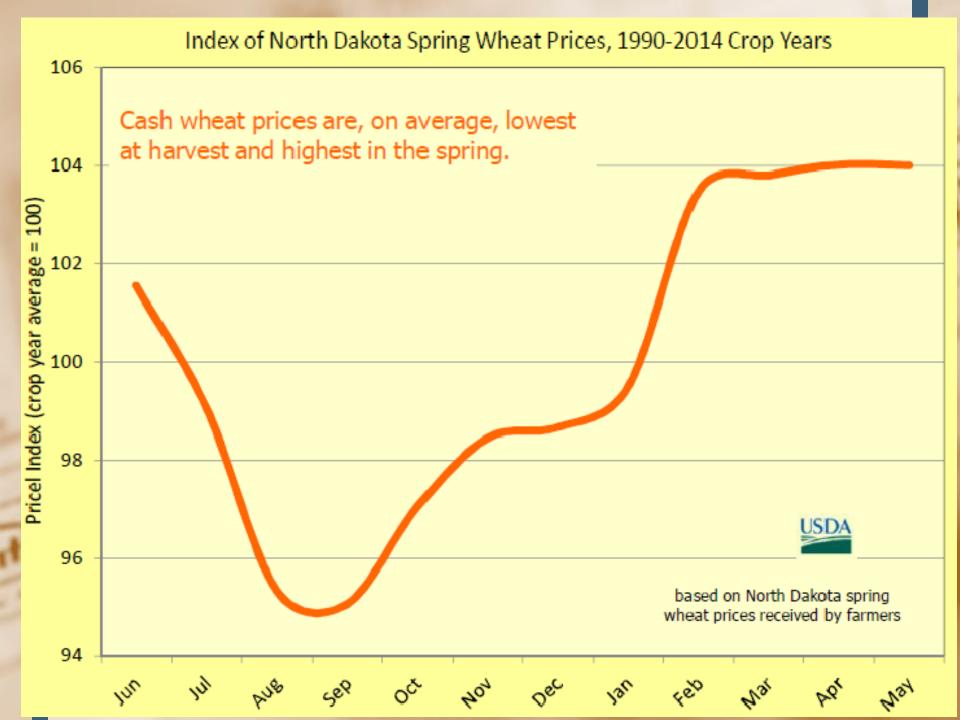

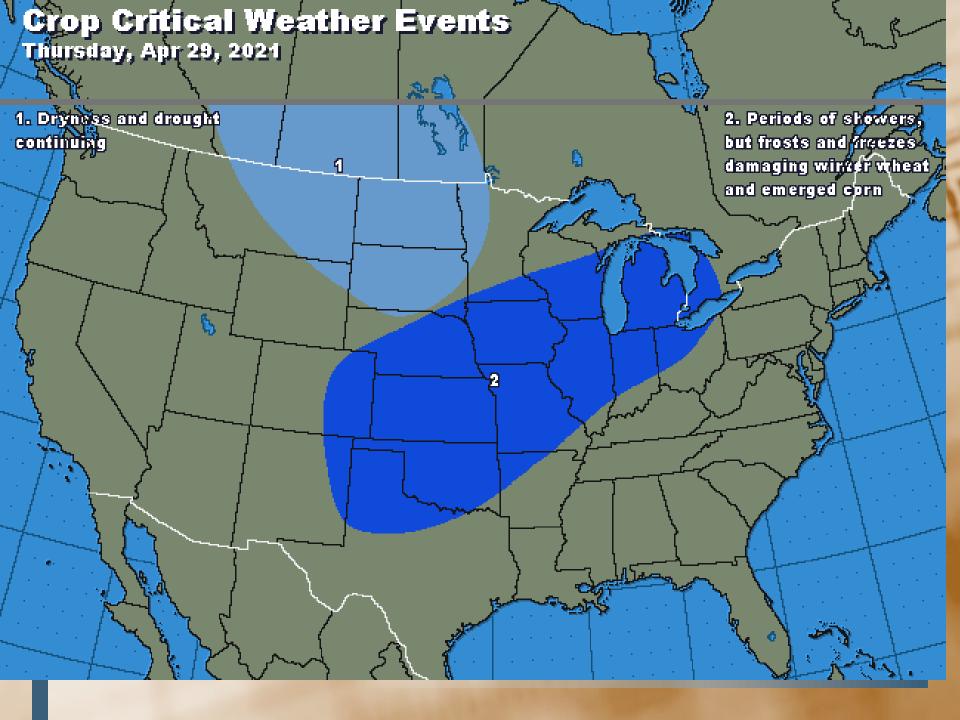

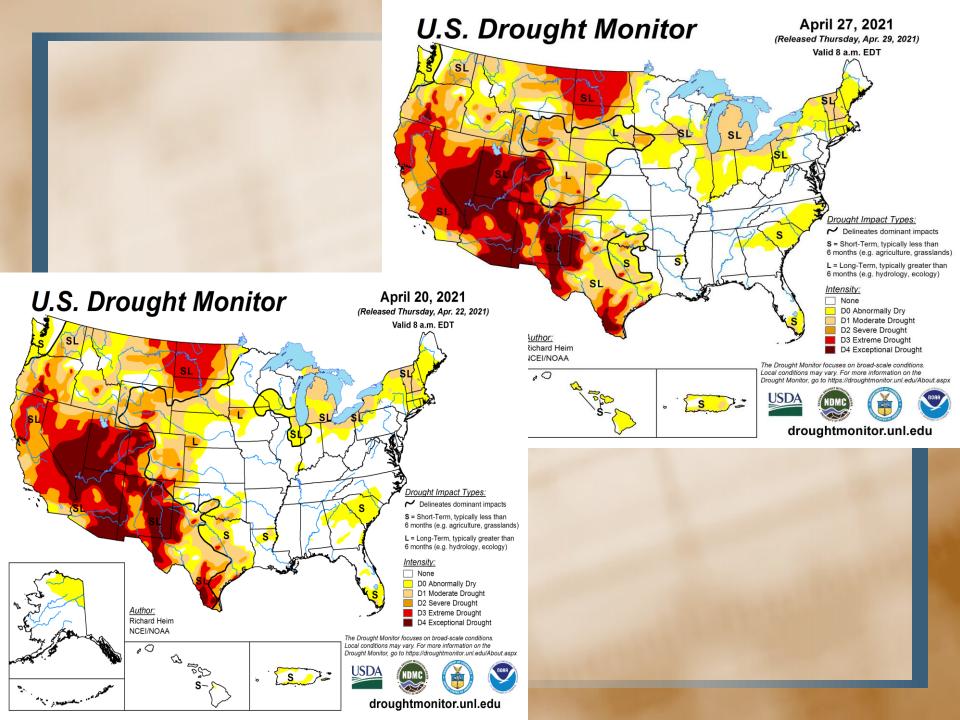

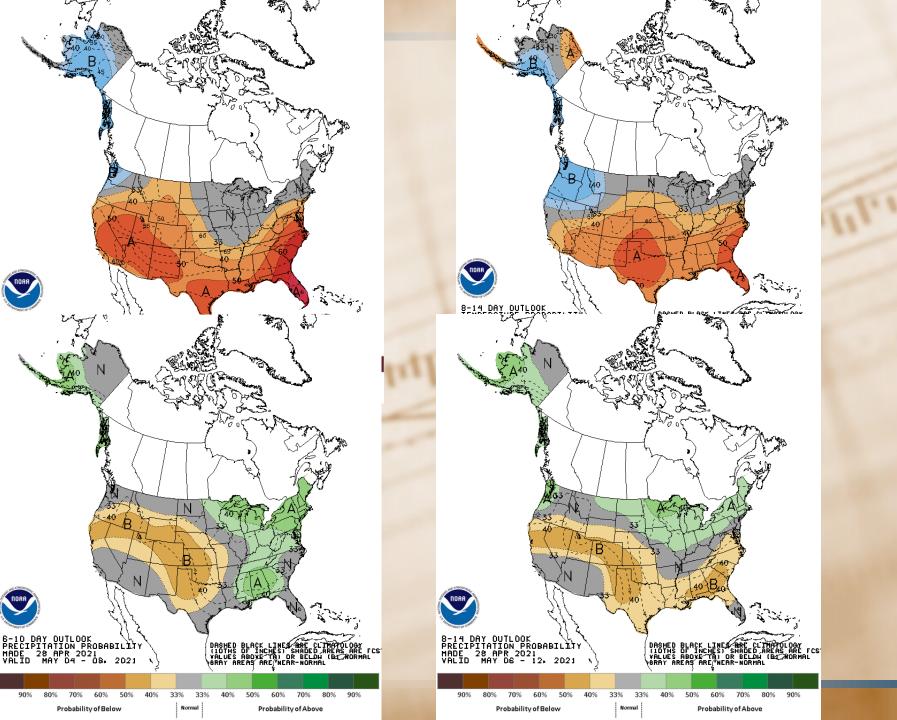

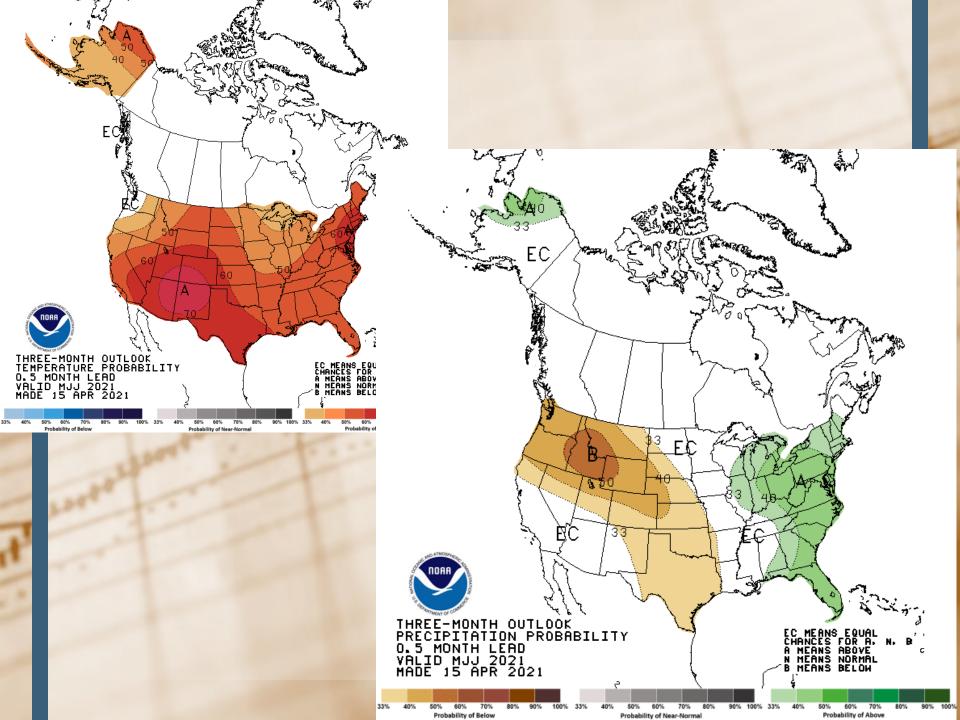

Most of the grains took a breather on Thursday with most of the selling tied to improving weather forecasts for the US, especially for the western Corn Belt and Northern Plains. This region has been kept out of the field not due to wet conditions but from cold. The past two day warm up and the forecast calling for warm temps to remain for the next three days will allow for planters to get rolling. But next week temps cool back down again with most of the highs reaching the mid 50's while the lows drop into the 30's. not very conducive for rapid plant growth.

Thursday's drought monitor map added a little support the grains as the US drought increased, with most of the expansion coming in High Plains, ND the be more specific. As of April 27, 100% of ND was in some stage of drought, 83% was in D3, 10% in D2, 5% in D2, and 2% in D0 (very southeast corner). This puts the western two thirds of the state in a very bad situation while the far eastern region of the state still has the opportunity to produce an average crop with timely rains. The significance of this, ND is the second largest wheat producer in the US, is fourth in planted soybean acreage in the US, and has the 10<sup>th</sup> largest acreage of planted corn. ND will not drive the market, but it will influence its direction.

				1.250%	7 years		

- General-Markets are pushing towards all time highs.
   Trading ranges are wider due to increased CME/MGE daily limits. US and SA Weather will be continued to be large factor for grain prices. Some end users are looking to hold onto contracts to force delivery as they are having difficulty in getting needed grains.
- April will be interesting month. This prediction was very good! May will most likely see similar volatility as April.

Corn-Ethanol production is picking up, however ending stocks are at 26 week lows and lowest level for this time of year in past 7 years and should be building for summer travel. Planting progress should be picking up in next week+. Markets will continue to look for information based on acreage/planting/usage. May support at \$5.19, resistance at \$5.71

Soybeans-Fast planting progress will slow some of the transition from corn to soybeans. US will start importing soybeans in May. Concerns over increased acreage due to decreases in spring wheat (1-3 million) is providing some pressure, but have extremely low ending stocks. May support \$13.40 and resistance at \$14.45

 Wheat-China feeding wheat instead of corn, changes demand for soybean due to higher protein wheat and they may use surplus to feed, but may come looking for high protein milling wheat. US doesn't have supply issue due to strong ending stocks and decent winter wheat crop. Concerns are still over Spring Wheat acreage due to drought, etc. May Support at \$6.00, Resistance at \$6.65

# 2021 Crop Targets-Review 2020 and 2021 Marketing Plan

- 21 Corn Dec Futures 2021-\$4.00, Next Target 6.00+ (FSA PP for 2021-3.75)
- 21 Soybeans Nov Futures 2021-Final Target \$14.00 (FSA PP for 2021-\$10.00)
- 21 Spring Wheat Sept Futures 2021-Target-\$7.75 Dec (FSA PP for 2021-\$5.50)
- 21 Spring Wheat Dec Futures 2021-Target \$7.75+
- 2022 Goals-Corn-Next target at \$5.25
- Soybeans-Next target \$13.35
- Spring Wheat-Next target \$7.00

### DAILY COMMENTARY

So, about that volatility thing we mentioned...

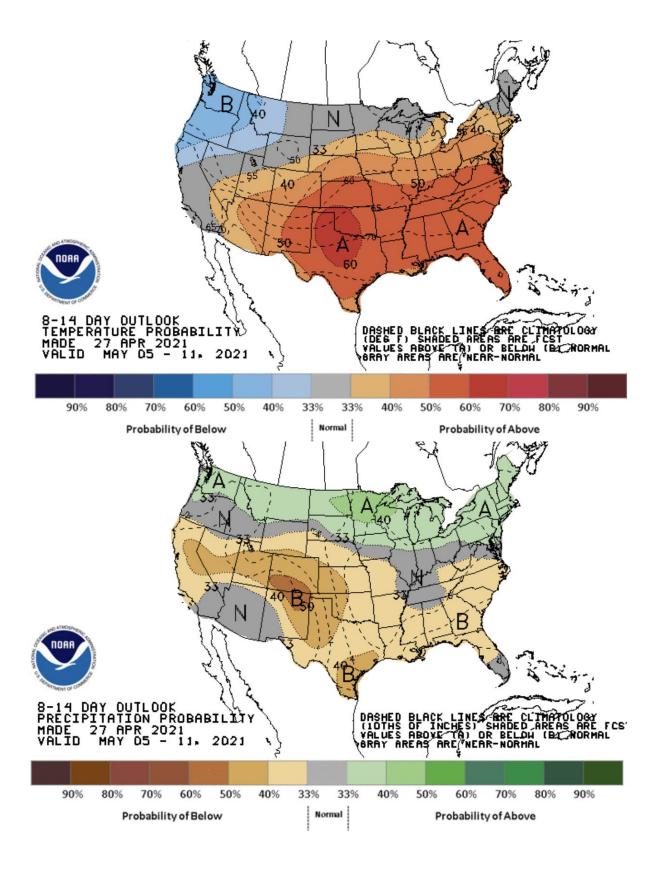

- This is just the past 48 hours in May corn...

Overnight the market quickly decided to test the recently reduced 25cent limit in corn, 30c in canola, etc. During the session the market wanted to test the limit up at 25c as well.

The downside of these exciting fun moves up; are that a single fund getting stopped out can quickly blow a market to limit one way, or the other... The trade seemed resilient today and quickly fought back towards unchanged in the Summer months of most commodities.

Weather reports are relatively neutral if not almost a little bearish in our view for North America.

The moisture on the Eastern Corn Belt will be supportive, but the trade is still closely watching the western half of the wheat belt states. We have customers who have had seed in the ground a month and are writing that germination off.

One retailer we speak with in central ND referenced their NH3 sales are as low as they can ever remember which is concerning from a soybean acres perspective. We aren't ready to hurriedly hedge another 20% of soybeans, but it is something we are researching over the next week or two to get a more concrete view on. Our thought is that specialties can absorb about 1-1.5 million wheat acres, the question is; are we losing 1-1.5 million wheat acres, or 3 million? That is something that makes a decent impact on the soybean stocks number.

Let us know if you have changes to your planting intentions, please push them through so we can share a concise view to all of our subscribers in the coming weeks.

Outside news is relatively benign in relation to the volatility of grains. Talk is there of tax plays coming from the current administration. They would likely make the velocity of money slow down. If taxes are changed on a capital gains perspective, you could anticipate seeing land and other assets change hands much more slowly going forward. This is still early, but there are some real talks starting to percolate through the system. As agribusinesses we will likely be able to work around more favorable terms; however with the potential implications into the broader market... we don't want to see too drastic of changes as they could really put a quick end to the nice rebound all outside

markets have going at this time.

One thing we are watching closely is how land and products are reacting and what type of sales

\*\*\*MAY FUTURES GO INTO DELIVERY THURSDAY AFTERNOON you run delivery risk if you don't roll forward\*\*\*

#### CORN COMMENTARY

What a session today. Volume moving in both front month contracts as futures traded 46 cents wide during this session. The activity felt real good during the day. It almost looks like we are trying to form a new trading range with the amount of willing buyers at lows today. The question will be; can we hold these numbers through a solid week of planting progress?

Futures today were super strong in the front months; as they should be and the new crop waffled much of the day around 10 lower.

Corn up front was limit up early on and then waffled late in the session to finish lower across the board. Open interest will be interesting to watch as you see futures pressure into delivery on Friday. After that we will likely see extreme volatility as bets get place and some owners entrench themselves in a position.

Corn settled down 9  $\frac{1}{4}$  in May futures at \$6.86  $\frac{1}{4}$ . The range was 44 cents; down 20 to up 25 during the session. December settled 15  $\frac{3}{4}$  at \$5.46  $\frac{1}{2}$ .

### **SOYBEAN COMMENTARY**

The concern on our mind today is the potential for soybean acres to ratchet up. While we are seeing planting up and down the valley this week; the quality and condition of any cereals from about 100 miles west of MN all the way into Montana (up into Canada, and down into South Dakota) is very up in the air.

We had another retailer mentioned above reference their slow sale of NH3 this year which reflects concern around overall about the potential for bean acres to climb higher.

After the two sided action today, we are watching closely the market and how it responds to near in support. The market looks to be trying to consolidate down here, uncertain of what the next 10 days of planting will bring.

Futures settled lower across the board; May soybeans had a range from -25 to +40 today and settled at \$15.76 \(^3\)4, up 8. November settled down 14 \(^1\)2 at \$13.28.

#### WHEAT COMMENTARY

Weather is going to be important... that is all we can say for wheat. With futures high enough in primary feed stocks, we are seeing cereals get looked at with a keen eye this summer.

Buckle on top of that the concerns around the US crop potential and this market is going to likely be a firecracker. I wouldn't be surprised to see the corn level of volatility in wheat as we near harvest. Are the yield expectations in line? It's hard to tell with almost no crop out of the ground despite a good

chunk planted nearly a month ago across the state.

Futures were two sided and finished down in the teens across all three markets.
